DR. NAMBIAR'S ULTRASOUND SCAN CENTRE

KARUNA, CHITTOORROAD, KOCHI 16

Ph: 364623/352833

ULTRASOUND, 2D-ECHOCARDIOGRAPHY & WHOLE BODY COLOUR DOPPLER SCAN

PATIENT'S NAME : Mrs. SREEDEVI

April 22, 2000

Consultant : Dr. S. KRISHNAKUMAR

Many thanks for the referral.

REPORT

Ultrasound study of the uterus and adnexa

(Trans.abd. & Trans.vaginal scan)

Uterus : measures about 7x3.2cms in diameter. Uterus is normal in size and shape. Endometrial lining is thickened measuring about 12mm's in width. No mass lesion seen in the uterus. Cervix is normal.

Ovaries : A well encapsulated cystic lesion seen in the left adnexa in the region of the ovary, measuring about 3.4x3.7cms in diameter. 2 cystic areas are seen in the right ovary, bigger one measuring about 12x13mm's in diameter and the other 7x6mm's in diameter.

Tubes Changes of thickening and edema seen in the right tube with changes of dilatation measuring about 2.9x1.2cms in diameter.

No fluid is seen in the cul-de-sac.

Urinary bladder : Normal lumen and walls.

IMPRESSION :

1. A well encapsulated cystic lesion in the left adnexa in the region of the ovary, measuring about 3.4x3.7cms in diameter - follicular cyst.

2. 2 cystic areas in the right ovary, bigger one measuring about 12x13mm's in diameter and the other 7x6mm's in diameter - follicles.

DR. NAMBIAR'S ULTRASOUND SCAN CENTRE

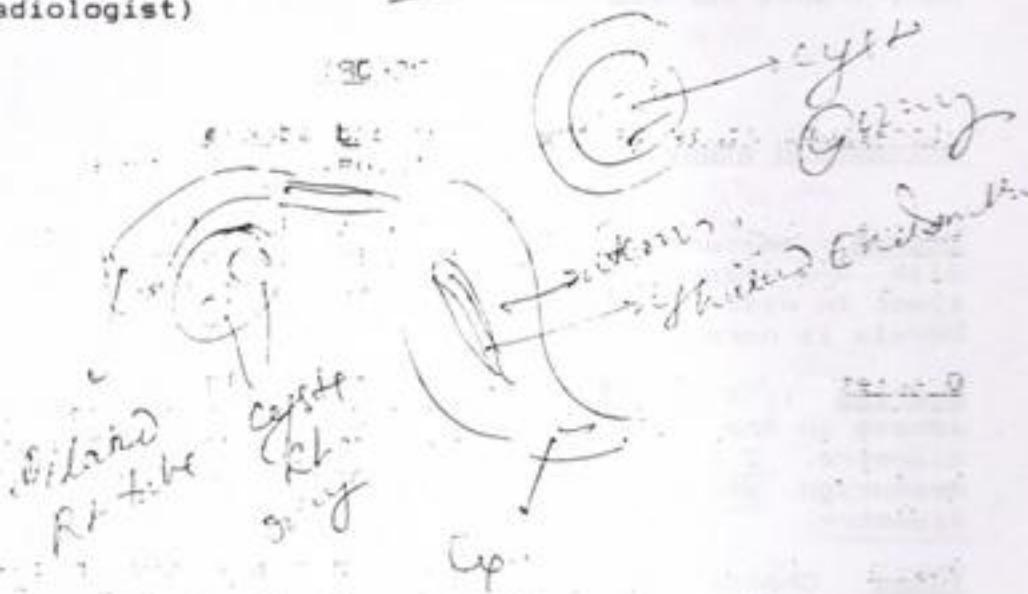

KARUNA CHITTOOR ROAD, KOLKATA - 7

3. Changes of thickening and edema in the right tube with changes of dilatation, measuring about  $2.9 \times 1.2$  cms in diameter - due to inflammation.

4. Thickened endometrium - due to hyperplasia.

Suggest clinical correlation.

Dr. DAMODARAN NAMBIAR.MD,DMRD.

**REPORT****Ultrasound study of the uterus and adnexa**

(Trans.abd. &amp; Trans.vaginal scan)

**Uterus** : measures about 6.2x3cms in diametre. Uterus is normal in size and shape. Endometrial lining is within normal limits. No mass lesion seen in the uterus.

Cervix is normal

**Ovaries** : A well encapsulated cystic lesion seen in the left adnexa in the region of the ovary measuring about 3.5x2.9cms in diametre. Right ovary is normal.

**Tubes** No abnormal thickening or dilatation noted.

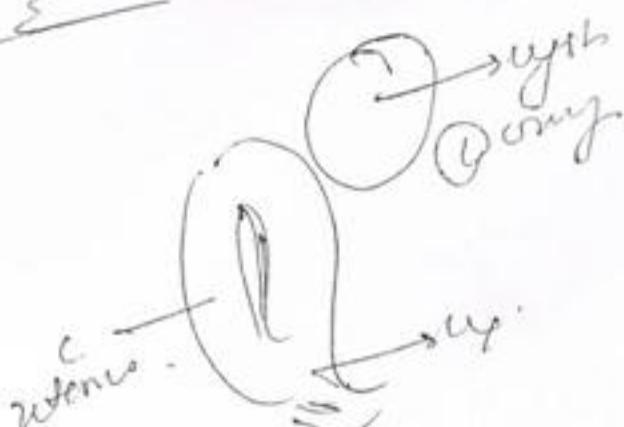

No fluid is seen in the cul-de-sac.

**Urinary bladder** : Normal lumen and walls.**IMPRESSION :**

A well encapsulated cystic lesion in the left adnexa in the region of the ovary measuring about 3.5x2.9cms in diametre - ovarian cyst.

Suggest clinical correlation.

REPORT

Ultrasound study of the uterus and adnexa (T.A & T.V Scan)

Uterus : is bulky. A well defined gestational sac is seen in the upper mid part of the uterine cavity with a well defined fetal nodule inside.

CRL of the fetus measures about 10mm's corresponding to a gestational age of 7 to 8 weeks. Fetus shows normal heart beats.

Cervix measures about 3.8cms in length. No dilatation seen in the internal os.

Ovaries : A cystic area seen in the right ovary measuring about 4.2x4cms in diametre and a similar cystic area seen in the left ovary measuring about 2.9x2.4cms in diametre.

No fluid is seen in the cul-de-sac..

Urinary bladder : Normal lumen and walls.

IMPRESSION :

1. A single live fetus in the uterine cavity corresponding to a gestational age of 7 to 8 weeks.

2. A cystic area in the right ovary measuring about 4.2x4cms in diametre and a similar cystic area in the left ovary measuring about 2.9x2.4cms in diametre - ovarian cysts

Suggest clinical correlation and follow-up USS
